

We try to make our park as accessible as possible to all but sadly some areas of the trail are unsuitable for prams and wheelchairs or for those who have difficulty walking.

Can you find out about the creatures you might find in the park?

Follow our nature story trail and find out about some of the creatures in the park. There are 10 creatures to discover... can you find them all?

Did you know...

All of these creatures live very interesting lives...

• A frog starts its life as frog spawn, eggs in little cases laid by the female. As it grows this changes into tadpoles (larvae). As they grow they change into frogs. This change is called **metamorphosis**.

• A **scurry** is a group of squirrels living together.

• Badgers have poor eyesight but they do have excellent hearing and sense of smell and are much more likely to hear or smell you than see you.

• Hedgehogs have around 5000 to 7000 spines on their back. These can be raised and lowered to respond to threatening situations.
